

Figure 1: Angular distribution of dilepton pairs in $p+Cu$ collisions at 800 GeV measured by FNAL E772. The solid curve is a fit to $1 + \lambda \cos^2 \theta$. Data taken from P. McGaughey, “Recent measurements of quarkonia and Drell–Yan production in proton nucleus collisions,” *Nucl. Phys. A*, vol. 610, pp. 394C–403C, 1996.
